MacBook Air

MacBook Air

Power. It's in the Air.

MacBook Air with M1 is an incredibly portable laptop — it's nimble and quick, with a silent, fanless design and a beautiful Retina display. Thanks to its slim profile and all-day battery life, this Air moves at the speed of lightness.

Supercharged by the Apple M1 chip

From ₹99900.00*

Small chip. Giant leap.

M1 is our first chip designed specifically for Mac. Apple silicon integrates the CPU, GPU, Neural Engine, I/O and so much more onto a single tiny chip. Packed with an astonishing 16 billion transistors, M1 delivers exceptional performance, custom technologies and unbelievable power efficiency — a major breakthrough for Mac.

CPU

8-core CPU Devours tasks. Sips battery.

The CPU on M1 isn't just astonishingly fast—it balances high-performance cores with efficiency cores that crush everyday jobs while using far less energy. With that kind of processing power, MacBook Air can take on intensive tasks like professional-level video editing and action-packed gaming.

Machine learning

A 16-core Neural Engine capable of 11 trillion operations per second. Process that. Apps on MacBook Air can use machine learning (ML) to automatically retouch photos like a pro, make smart tools such as magic wands and audio filters more accurate at auto-detection, and so much more. That's not just brainpower that's the power of a full stack of ML technologies.

macOS

The power of macOS on M1.

macOS unlocks the potential of the M1 chip and transforms Mac with all-new ways to work and play. Connect, share and create like never before using FaceTime and Messages. Explore the web on the streamlined Safari, the fastest browser in the world.² And work across Mac and your other Apple devices with Universal Control. macOS also includes industry-leading privacy features and best-in-class security.

Retina display Lifelike colours for unreal beauty.

Images take on new levels of detail and realism on the brilliant 33.74 cm (13.3"), 2560×1600-resolution Retina display. Text is sharp and clear. Colours are bright and vibrant. And the glass goes right to the edge of the enclosure, so nothing takes away from your gorgeous view.

Magic Keyboard

Go ahead. Take the keys.

When a keyboard types like a dream and still does a whole lot more, that's magic. With pre-programmed shortcuts, useful features are easy to access. Get help from Siri, switch keyboard languages, respond with the perfect emoji, find documents with Spotlight — there's so much you can do with just a tap. And the backlit keys with ambient light sensor help you type in low-light settings.

P3 wide colour gamut
